

ENVIRONMENTAL POLICY

MIA PERA HOTEL has determined its Environmental Policy as a dynamic policy that offers a management approach integrated with the goals of many policy areas, based on the criteria of the relevant laws and regulations, in the priorities of protecting the environment, preventing the problem at its source, using natural resources efficiently and sustainably, securing human health and raising living standards to the highest level.

As MIA PERA HOTEL, we attach importance to environmental policies and renew ourselves every day in this regard in order to leave a cleaner and more livable world to future generations. We aim to use our existing resources in the most efficient way by approaching environmental issues with sensitivity. The rapid depletion of natural resources, climate change, global warming and the increase in population are seen as the most important problems of the world we live in. In this context, we attach importance to clean and renewable energy within the framework of sustainability in our environmental and social responsibility activities and make our investments in this regard.

The basic elements of our environmental policy include minimizing environmental impacts and resource efficiency studies. In this context;

- Design products and manufacturing processes to reduce the amount and hazardous nature of our emissions, discharges and wastes
- Understand the environmental impact of our operations in terms of generated wastes, air emissions, water discharges and other impacts such as light, sound and noise, and develop plans and set targets to minimize these impacts
- Report, thoroughly investigate and take measures to prevent environmental incidents and complaints from occurring, but when they do occur, to prevent recurrence
- Promote the cyclical phased use of our processes, raw materials, water, energy, recycling and wood and forest products in terms of resource use efficiency
- Reduce waste going to landfills and promote secondary use of by-products and improve recycling rates
- Conduct water impact assessments to help us better manage our water footprint and protect our water resources
- Promote collective action on common challenges, including focusing more on water-stressed areas within common water issues and educating stakeholders such as suppliers and guests on water issues.

Marina Boutique Hotel encourages the implementation of these studies and incentives not only within itself but also through collaborations with other surrounding facilities.

As MIA PERA HOTEL our corporate environmental policy has been created in line with the responsibilities we have adopted.

Protecting biodiversity and ecosystems by adopting sustainable tourism within the scope of environmental protection activities is among our responsibilities.

In this way, we undertake to contribute to the values of the country and the development of the region.
